* Not required for M7CL-48ES

** Please ask about the M7CL-48-Pack special pricing. This system includes the M7CL-48ES console and 3 x SB168-ES interfaces.

Yamaha now offers a range of digital multicore kits to suit applications of all sizes. Each kit comes with the SB168-ES interfaces and required cards, with the cat5e cabling available separately. Coda Audio is happy to provide a complete quote tailored to your exact requirements.

The SB168-ES remote stage box is designed to be used together with Yamaha digital mixers like the LS9 and M7CL. Utilising EtherSound technology, the SB168-ES gives you low-latency, high-quality bidirectional audio and control transfer over distances of up to 100 metres using a single Cat5e cable. This 3RU, rack mountable stagebox with internal power supply gives you 16 XLR inputs, each with its own remotely controllable mic preamp, in addition to 8 XLR outputs. Daisy chain up to four units for simultaneous use.

The MY16-ES64 Ethersound interface card and the MY16-EX expansion cards provide connectivity between your Yamaha digital console and the SB168-ES stageboxes.
